

Accel[®]

A Comprehensive Multi-Vitamin & Mineral Supplement

- A balanced daily supplement of essential nutrients to promote optimum health for all types of horses.
- Includes all recognized water and fat-soluble vitamins, a full range of minerals in chelated form, & essential amino acids.
- Also contains microbial and yeast cultures to aid digestion.

A Foundation For Optimum Health Accel is a balanced daily supplement of the full spectrum of essential nutrients for all types of horses. Accel's unusually comprehensive formula provides a foundation for optimum health—what all equine athletes need to perform their best. Many of America's top trainers and riders rely on Accel every day to get the most out of their horses' training and performance. Accel is also the choice of many successful breeding farms, equine rescue organizations and veterinary clinics. Accel's formula supplies all of the recognized water and fat soluble vitamins, including many that are missing in most other supplements, for well-rounded support of the vitamin needs of most horses.

Trace & Macro Minerals Most equine researchers now point to dietary mineral levels and balance as a key factor for successful breeding, sound growth, and good health in mature horses. The inadequate levels of trace minerals in much of today's hay and grain have led many experts to recommend balanced supplementation. Proper balance is crucial to ensure proper absorption and utilization of minerals in the horse's body. Accel delivers zinc and copper in the recommended 3 to 1 ratio, plus iron, manganese and cobalt, all in chelated form. Chelation encourages more rapid and complete absorption. The more readily absorbed trace minerals, selenium and iodine, are supplied in quality conventional forms. Accel also supplies five macro minerals to help balance and fortify your basic feeding program. Calcium and phosphorus are supplemented in the ideal 1.4 to 1 ratio, along with magnesium, potassium and sulfur.

Enzymes & Microbial Cultures The horse's digestive system works best when grazing a light, steady flow of food, the way nature intended. Stall-feeding results in incomplete digestion and substantial waste. Accel fortifies the digestive tract with four digestive enzymes, plus a seven culture direct-fed microbial complex. These beneficial microorganisms are compatible with equine digestive systems.

Synergy There's even more to Accel than the sum of its 47 nutrients, seven direct-fed microbial cultures, and active yeast culture. Accel is nutritional synergy—the reinforcing interaction of balanced nutrients that promotes optimum overall health. To see what optimum nutrition can do for your horse's health and performance, start with a solid foundation—start with Vita-Flex Accel!
